

The background of the entire screen is a high-resolution image of the Earth's horizon from space. The horizon is a curved line separating the dark, cratered surface of the Earth from the bright blue and white atmosphere. Above the horizon, the Milky Way galaxy is visible as a dense band of stars and cosmic dust against the blackness of space. In the upper center, a large, bright sun is partially obscured by a dark, circular disk, creating a solar eclipse effect. The sun's light creates a strong lens flare and illuminates the Earth's surface below.
